Dis-Chem didn't make health better.

It made it usable.

How South Africans are managing wellness—and what it means for health brands.

Why This Matters Now

South African health decisions are driven by **survival**, not **optimisation**.

Cost pressure is still the defining reality. Almost half of households (49%) report they only have income for basics. Health spend must be fiercely justified.

Energy is scarce (physical and mental). Load shedding hangover, long workdays, and commuting fatigue leave zero capacity for complex new routines.

The "Value-Hacking" mindset rules. Consumers are stacking deals and sticking to what works. Risky switches to unproven health trends are down.

Decision fatigue has peaked. Low tolerance for lifestyle overhauls. If it's hard to figure out, it's ignored.

49% of consumers

Report having income only for absolute basics.

! Critical Constraint

The Consequence

Health isn't about "getting ahead" anymore. It's about stability.

Usability is now a premium feature.

THE OLD MODEL

The Old Model of Health Innovation

For years, brands built strategies on the assumption that consumers wanted to be transformed.

Transformation Promises

Marketing focused on "new you" narratives and radical lifestyle overhauls.

Discipline-Led Routines

Success required strict adherence, complex regimens, and high effort.

Long-Term Aspiration

Benefits were framed as distant rewards rather than immediate relief.

“Become Better” Framing

Health was positioned as a project of self-optimization and constant growth.

Dominant logic until ~2024

The Reality of Daily Health Behaviour

South Africans aren't failing at health because they lack ambition. They are failing because the "ideal" version of health requires **resources—time, energy, certainty**—that they simply don't have right now.

People are stretched

Between load shedding, commuting, and cost pressure, mental bandwidth is at zero. Health "admin" is the first thing to get cut.

Consistency is fragile

Routines are easily broken by external shocks. A plan that requires 100% adherence fails at the first interruption.

Complexity drives drop-off

Decision fatigue is high. If a product requires education, a new routine, or complex instructions, it stays on the shelf.

Function beats ideals

"Will this get me through the day?" is a more powerful purchase driver than "Will this extend my life?"

Health hasn't become less ambitious. It's become more realistic.

1

Fewer goals, clearer needs.

Consumers are trading broad wellness aspirations for specific, functional necessities that get them through the day.

2

Support over self-improvement.

The mindset has shifted from "fix me" to "help me." Products are hired to support survival, not demand transformation.

3

Health as usable help, not a new identity.

Integration wins. If it requires a new lifestyle to work, it gets rejected. If it fits the existing chaos, it stays.

Strategy Deconstruction

What Dis-Chem Actually Did

They stopped selling "wellness" as a destination and started selling it as **fuel for the journey**.

Core Focus Areas

- Energy
- Sleep
- Stress
- Immunity

Focused on immediate deficits

Shifted assortment prominence to solve for exhaustion and burnout—problems people feel *right now*.

Everyday-use framing

Moved language from "program" to "daily support." Positioned products alongside coffee as routine essentials.

Minimal behaviour change

Products don't ask users to wake up earlier or meditate. They simply ask to be taken. Lowers the "effort tax."

Integration into pressure points

Targeted specific high-stress moments: the Monday drag, Sunday anxiety, and the mid-week slump.

Why Usability Matters

In a context of fatigue and financial pressure, ease of use isn't just a feature—it's a psychological safety mechanism.

Reduces Failure Anxiety

Consumers fear investing in routines they can't sustain. Usability removes the risk of "another failed attempt" before they even buy.

Encourages Repeat

Adoption is easy; retention is hard. Products that feel achievable on a bad day are the ones that get purchased again on a good day.

Lowers Mental Resistance

When decision fatigue is high, the brain rejects friction. Low-effort formats bypass the mental "too hard" filter at the shelf and at home.

Builds Confidence

Clarity is a proxy for trust. Simple, usable propositions signal that the brand understands reality, making the consumer feel secure.

Strategy

Integration as Strategy

Not products that demand life changes

Products that fit into life

Background Support

Health isn't the main event; it’s the backstage crew. In a busy week, products must support daily function without becoming another task to manage.

Obvious Moments

Usage occasions must be self-evident. "Take when tired" wins over complex timing protocols. Clarity reduces cognitive load.

Familiar Formats

Innovation lies in the benefit, not the format. Using known vehicles (gummies, shots, simple pills) lowers the barrier to trial.

Local Pressure Context

The South African consumer environment is unique. Innovation cannot just be "good"—it must survive the specific frictions of local daily life.

Key Stressors shaping behaviour

Infrastructure

Load Shedding & Unpredictability

Routines are constantly disrupted. Products requiring timing or electricity face high barriers to use.

Time Poverty

Long Workdays & Commutes

With extensive travel, energy is depleted early. Solutions must work in the exhausted "5-9" window.

Social Load

Multi-Role Stress

Managing careers, households, and extended family simultaneously. Support is a necessity, not a luxury.

Economic

Tight Budgets & Value Checks

"Value-hacking" prevails. Consumers scrutinize every purchase to see if it earns its keep or gets cut.

This Is Not Anti-Health.

Clarifier

IT IS NOT

- **Anti-Goals or Anti-Prevention**
  It doesn't mean giving up on better outcomes or lowering standards.
- **A "Giving Up" Signal**
  It isn't a rejection of health, but a rejection of the impossible effort often required to achieve it.

Core Shift

IT IS

- **Pro-Function & Sustainability**
  Prioritizing routines that people can sustain creates better long-term health than broken ambitious plans.
- **Coexistence of Relief & Care**
  Immediate relief (energy, sleep) acts as the gateway to long-term prevention.
- **Clarity as Confidence**
  In this market, clarity signals competence. Hype signals risk.

Research Patterns

What Innovatr Health Research Consistently Shows

Across functional beverages, wellness, and supplements, we see the same behavioral signature.

The consumer isn't rejecting health; they are editing it for feasibility.

Source
Innovatr Q1 2026 Analysis

Preference Shift

Function > Transformation

Specific, single-minded benefits (energy, gut health) outperform broad "holistic wellness" claims. Ambiguity creates hesitation; clarity drives choice.

Purchase Driver

Immediate Needs Rule

Energy, sleep, and stress relief—problems felt *today*—consistently outrank long-term preventative goals in purchase hierarchy.

Drop-off Risk

Complexity Kills Conversion

Drop-off rates spike when products require a routine overhaul (>2 steps). Simplicity is currently the strongest retention metric.

Behavioral Gap

Interest ≠ Action

Decision fatigue explains the gap between high interest and low sales. Consumers engage with many ideas but only buy the one that feels effortless.

Functional Permission

Before any health purchase is made, it must pass through two critical filters. **If the answer is vague, the wallet stays closed.**

The Immediacy Filter

"Will this help me get through today?"

Consumers are solving for present-tense survival (energy, stress), not just future-tense prevention.

The Reality Filter

"Can I actually keep this up?"

If the routine requires high discipline or effort, it is rejected as a "future failure." Usability creates the belief that consistency is possible.

Usability and plain language are not just "user experience"—they create **trust** under budget scrutiny.

Reframe

Coping Beats Optimising.

Right now, health is not about becoming a "better version" of yourself. It is about supporting the version of yourself that is trying to survive the week.

OLD MINDSET		NEW REALITY
Improvement	→	Maintenance
Ambition	→	Relief
Transformation	→	Support

Connected Trend

Indulgence Without Guilt

We see the exact same logic in snacking behaviour. Consumers are seeking **small, sustaining wins** they can justify and repeat.

Emotional Job-to-be-Done:

"Help me keep going."

Source: Innovatr Health & Snacking Research

Friction Analysis

Where Health Innovation Loses People

Drop-off isn't apathy.
It's a reaction to the **price of engagement** being too high.

Lifestyle Promises

Transformational promises like "New You" feel heavy and unattainable, creating a psychological gap consumers fear they can't cross.

Behavioral Demands

Strict routines break the moment life gets busy. High-maintenance protocols are the first thing sacrificed during stress.

Over-Education

Science lessons confuse rather than clarify. If consumers have to "study" to understand the benefit, decision fatigue sets in instantly.

Guilt-Based Framing

Messaging that implies failure. In a high-pressure context, guilt is not a motivator—it is a valid reason to disengage entirely.

Success Factors

Where Health Innovation Wins

In a constrained market, winning propositions don't ask for more effort—they offer immediate relief.

The Golden Rule

"If I have to read the instructions twice, I'm not buying it."

Clear Role

Specific jobs-to-be-done: Energy, Sleep, Stress, Immunity. No vague "wellness" claims.

Easy Integration

Fits into existing daily rhythms. Doesn't demand a new morning ritual or lifestyle overhaul.

Immediate Relevance

Solves a problem felt *today*. Immediate relief beats long-term theoretical prevention.

Low Effort & Risk

Low cognitive load to understand, low price barrier to try. Reversible choices.

Familiar Formats

Gummies, shots, simple pills. Formats that feel like treats or basics, not interventions.

Innovation Criteria

Commercial Impact

The Advantage of Practical Launches

In a fatigued market, "boring" functionality is currently outperforming "exciting" transformation. The metrics tell the story.

> *"Reliability is the new excitement. A service that consistently delivers what it promises is more exciting than one that lures them in and disappoints."*
>
> Innovatr Trends 2025

Acquisition

Faster Adoption

Low-complexity products reduce the "risk barrier," making trial an easier decision for stretched consumers.

Retention

Stronger Retention

Ease creates habit. Low mental effort products stay in the routine long after motivation fades.

Stability

Less Dropout

Removing behavioral demands protects the user from "failing," keeping them securely in the funnel.

Brand Equity

More Credibility

Claims matching felt effects build trust instantly. Delivering "better sleep" wins over "a new you."

Source: Innovatr Commercial Analysis

Strategic Action

What This Means for Health Brands

The Usability Mandate

Winners won't be brands with biggest promises, but ones with **lowest barriers**.

Shift: Aspiration → Integration

Simplify Usage

One clear job-to-be-done. Don't ask a consumer to learn a new system; **solve one problem perfectly**.

Respect Fatigue

Remove steps, shrink decisions. If it requires willpower, it fails. Design for the **tired consumer**.

Design for Real Lives

Use familiar cues and obvious moments. Avoid strict regimens. Make it **reversible and forgiving**.

Price & Pack for Repeat

Entry points must be low risk. Ensure "cost of failure" feels negligible. Enable consistency the **budget can carry**.

Core Strategic Principle

Design for function, not transformation.

1

Reduce Friction

Remove steps at every touchpoint. If it feels like 'admin' or extra work, it will be the first thing cut when energy is low.

2

Support Reality

Don't try to rewrite their lives. Build products that fit into the chaotic, tired, budget-conscious reality they already manage.

3

Enable Consistency

Create routines the budget can actually carry. Success is defined by what the consumer can afford to do again tomorrow.

Health innovation in South Africa isn’t about becoming better versions of ourselves.

It’s about coping better within the lives we already have.

Brands that support **functionality** will earn long-term trust.

This isn't a Dis-Chem move.
It's a behavioural shift.

Energy | Sleep | Stress | Usability

Different brands. Same direction.

Innovatr Intelligence exists to identify these shifts early — across categories and launches — so brands understand what health means to South Africans *now*, not what it used to mean.

Innovatr Intelligence

Members don't just track health launches. They understand the behaviour shaping them.
