Market Simulator

Forecast the future, **confidently**. See exactly how new products will perform — powered by real consumer choice.

INNOVATR | UpSiide

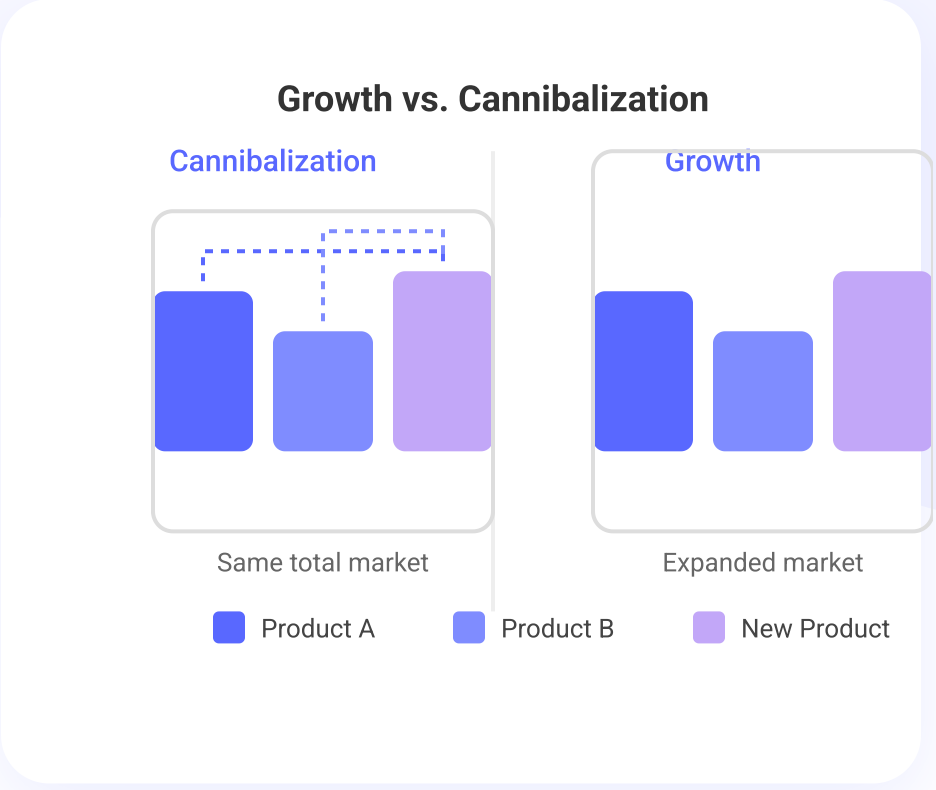
Why It Matters

The question every innovation team must answer

> ***Will this grow the category — or just steal share from what we already have?***

Market Simulator gives you the answer:

- Turn uncertain guesses into confident data
- Quantify growth vs. cannibalization instantly
- Launch with confidence, backed by evidence



Predict the future with data

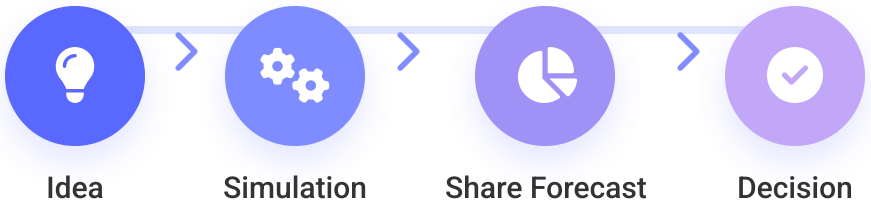
See exactly how your innovation will impact your existing portfolio before you launch.

What Is Market Simulator?

Your crystal ball for consumer choice

Market Simulator models how real consumers would choose among your products in the marketplace.

- See where an innovation will source volume from
- Understand if it grows or cannibalizes share
- Optimize your portfolio before launch



Our patented choice modeling technology predicts real consumer decisions

Simulate real-world consumer decisions up to 100x faster than traditional models using Hierarchical Bayesian techniques.

The 3 Key Questions

The core capabilities that drive confident decisions

Market Simulator helps every product team answer:

1. How does an innovation play with in-market products?
2. Does it grow or cannibalize share?
3. How can we optimize our product portfolio?

- Understand how new products interact with your existing lineup
- Quantify growth potential and identify cannibalization risks
- Optimize your product mix for maximum market impact

How It Works

From data collection to actionable insights – transform raw feedback into market predictions.

1

Survey Magic

We gather responses from your target audience through engaging surveys

2

Smart Analysis

Our AI processes preferences using advanced Hierarchical Bayesian modeling

3

Market Lab

Create virtual market scenarios with your exciting product lineup

4

Crystal Ball

See the future with accurate share predictions and growth insights

Fun Fact: Market Simulator runs up to 100x faster than traditional models, letting you test more ideas in minutes instead of weeks!

Inside the Simulator

Powerful analytics made beautifully simple

Get started in three simple steps

1. Access via **Idea Screen** → **Report Mode** → **Run Simulator** tab
2. Processing takes **~5–6 minutes**; you'll get an email notification when results are ready
3. Explore interactive visualizations and unlock actionable insights for your innovation

Visit our help center for tips on interpreting your simulation results

Market Simulator

Explore Your Idea's Potential

Transform survey data into dynamic market simulations and see the future before it happens

Run Simulator

Analyzing market scenarios...

(5-6 minutes processing time)

The Core Views

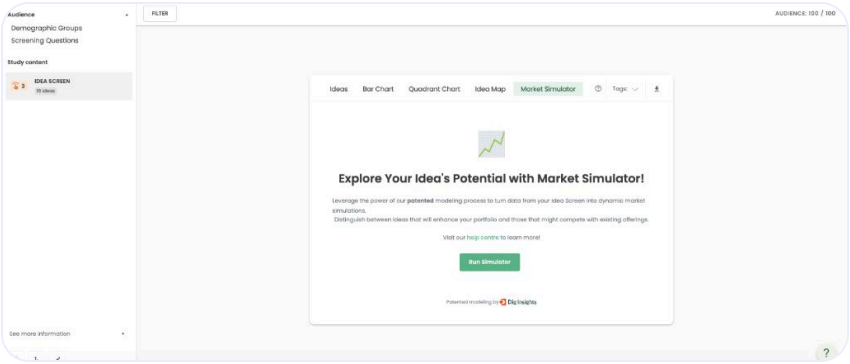
See your market in two playful perspectives

Card View: Get a visual overview of all ideas and how they interact. Perfect for spotting patterns and relationships at a glance.

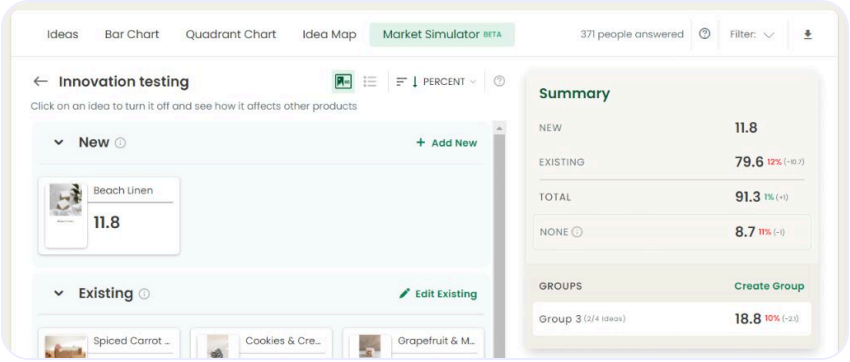
List View: A sortable list that makes it easy to identify which SKUs are most affected by your innovation decisions.

Switch anytime: Toggle between views to get different perspectives on the same data, helping you make more confident portfolio decisions.

Card View



List View



Click on any card or list item to see how it affects other products in your portfolio

Summary at a Glance

Quickly spot growth or cannibalization at first look

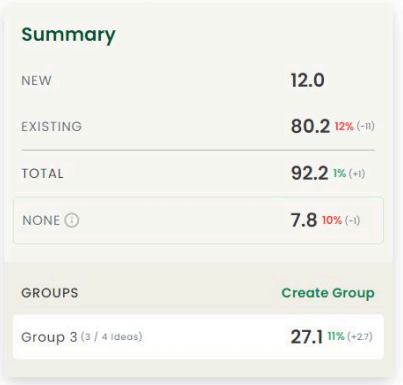
New: Share for the innovations you're testing

Existing: Share for current in-market products

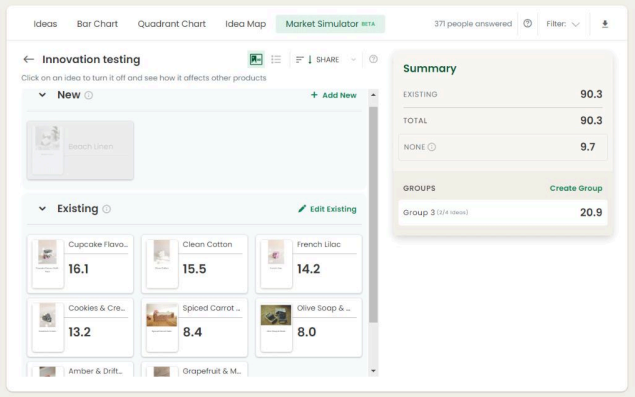
Total: Combined New + Existing market presence

None: Share going to no choice (lost opportunity)

Pro tip: When Total exceeds previous Existing, your innovation is growing the category, not just stealing share!



See live results with actual market impact percentages



Real Results from Market Simulator

See growth indicators and market impact percentages updated in real-time as you test different innovation scenarios.

The _____ Explained

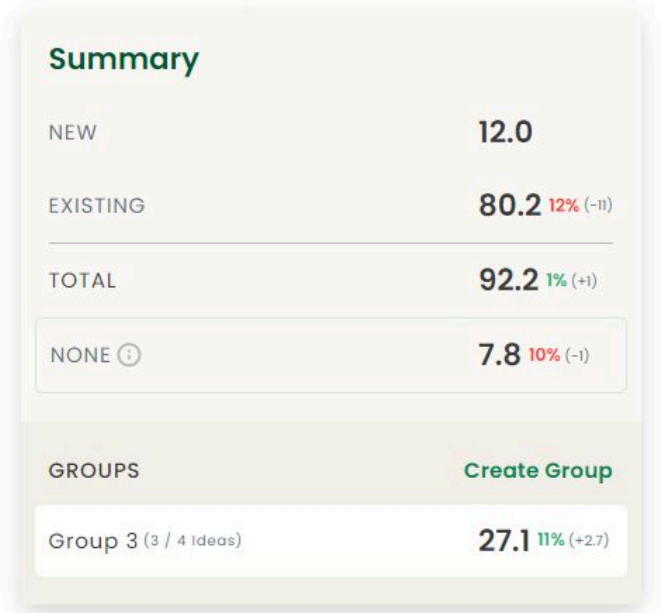
Understanding how your market results are organized

Group	What it represents	Example
New 12%	Share for the new ideas you're testing	New fragrance launch
Existing 80%	Share for current market products	Current product lineup
Total 92%	Combined share of New + Existing	Your total market presence
None 8%	Share that would go to none of the ideas	Unmet consumer needs

Key insight

The sum of New + Existing + None always equals 100% of the potential market. A high "None" value might indicate unmet consumer needs—a great opportunity for future innovation!

Real Interface - Summary View



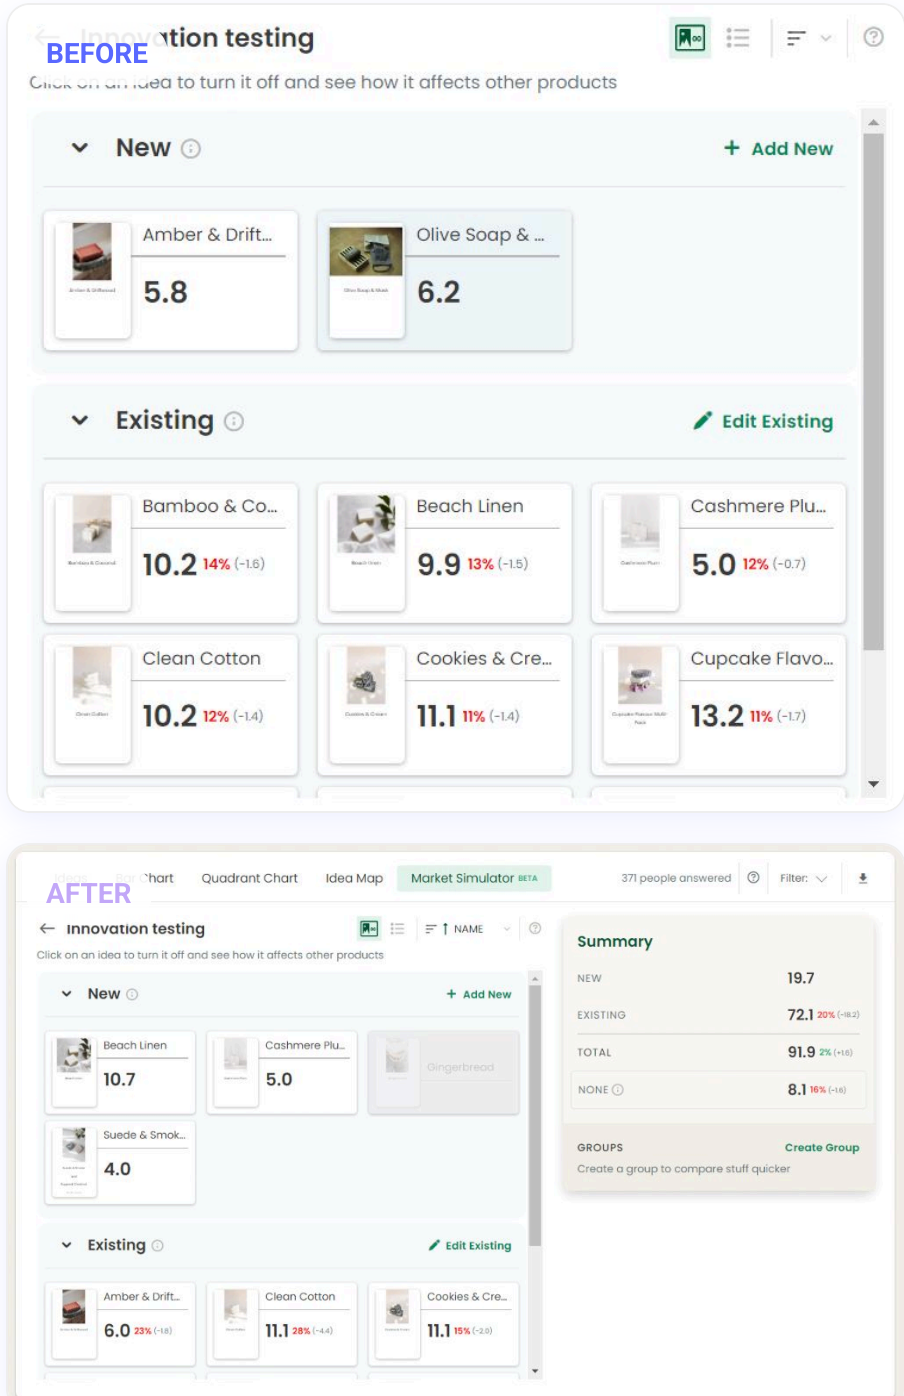
Actual data from the platform: See how the 4 groups appear in the real Market Simulator interface, with percentages showing market share distribution and performance indicators.

New vs. Existing: Impact Analysis

See how innovations reshape your market landscape

- Tag each idea as New or Existing to see real-time share shifts
- Click any idea to toggle it on/off and see where volume moves
- Identify winners, losers, and potential cannibalization
- Test multiple scenarios for optimal portfolio strategy

Watch how new products impact your portfolio



Interactive testing

Click on product cards to instantly see how share redistributes across your portfolio.

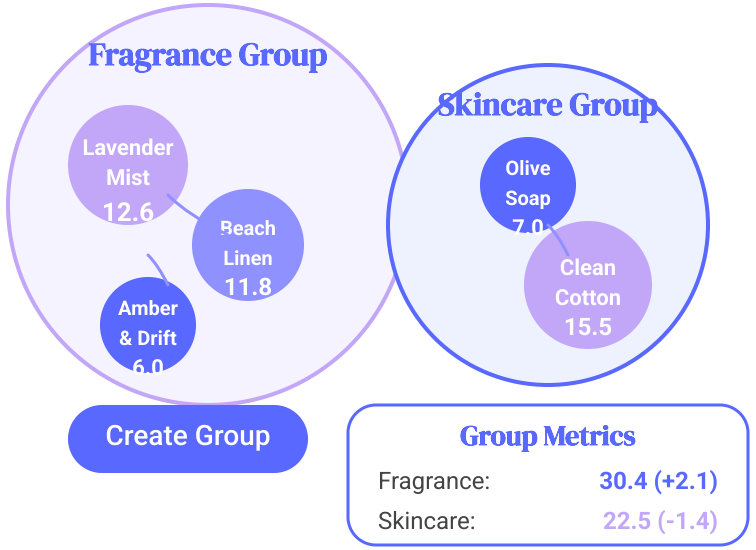
Grouping Ideas for Portfolio Testing

Test portfolios together to see the bigger picture

Test at brand, category, or portfolio level

- Create groups to see combined impact across brand families or product segments
- Groups are mutually exclusive – each idea can only belong to one group
- Compare group-level metrics to understand portfolio dynamics

Note: Only admins or space creators can edit groups to maintain data consistency.



Visualize Portfolio Relationships

Group-level analysis reveals hidden connections and optimizes your product strategy.

Market Simulator

Choose the right analytical tool for your business question

Business Question	Market Simulator	TURF Analysis
What's our optimal 8-flavor assortment?		✓
Which claims are most compelling?		✓
How many colors before diminishing returns?		✓
Will a new innovation grow or cannibalize share?	✓	
Which SKU should we delist post-launch?	✓	

Pro tip

Use TURF for reach optimization questions and Market Simulator for share impact scenarios. The tools complement each other in your product innovation toolkit!

Market Simulator Impact

Predicts market share impact and cannibalization effects of new products

vs

TURF Analysis Reach

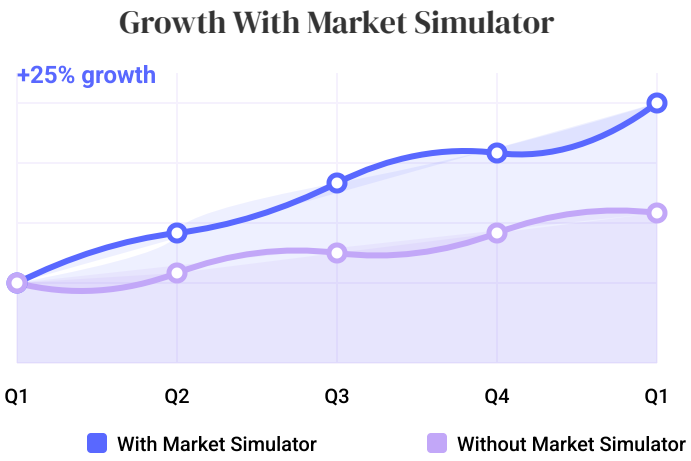
Maximizes audience reach with the minimum number of product options

Real Business Value for South African Brands

Making innovation work for the local market

Powering better decisions for SA's unique market needs

- Accelerate time-to-market with precise forecasts for SA's fast-moving consumers
- Build resilience against economic volatility with data-backed decisions
- Maximize ROI on innovation spend across key sectors
- Connect authentically with South African consumer preferences



CPG | Retail | Financial | Tech

Brands using Market Simulator see **2.5x faster time-to-market** and **30% higher ROI** on new products

Connected Workflow

Seamless integration from insight to action

Idea Screen

Test ideas and collect consumer feedback on concepts and innovations

Market Simulator

Simulate market outcomes and forecast share potential

Storyteller

Instantly create shareable decks with key insights and data

Share

Distribute actionable insights across teams for confident decisions

Seamless Integration: The entire workflow stays within the UpSiide platform — no need to export data or switch between tools!
